PROFESSIONAL SUMMARY

3+ years of industry experience in building and operating cloud systems on Azure and AWS. Took an LLM-powered analytics platform from first environment to launch: 29 container apps, 85+ Terraform-managed resources in each stage, approval-gated CI/CD, DevSecOps controls, SSO and continuous monitoring. Brings MLOps enablement experience: the hosting, secrets, scaling and observability behind AI workloads.

EXPERIENCE

CustomerInsights.AI

Aug 2024 – Present

Associate DevOps Engineer

On-site, Gurugram, India

- Led the end-to-end build-out and go-live of ciATHENA, an agentic AI analytics application for life-sciences clients, as the sole DevOps engineer during the initial phases.
- Fronted ciATHENA with Azure Front Door and Azure WAF, routing web and WebSocket traffic straight to the app for 10,000+ requests per day from 250+ distinct users (Front Door metrics); exposed backend APIs via Azure API Management and piloted Azure Application Gateway in a proof of concept.
- Stood up 3 environments (development, QA and production) on Azure Container Apps hosting 29 container apps, including 2 ciATHENA versions and supporting tools, with development and QA scale rules that start frontends in about 10 seconds while backends stay always-on; contributed AWS deployment work on a separate Amazon ECS Fargate stack.
- Authored reusable Terraform modules provisioning 85+ resources per environment, so each of the 3 environments can be recreated consistently from code rather than configured by hand.
- Deployed 20+ side applications built in Node.js, Python and React to production on Azure App Service, alongside Logic Apps and Container Apps jobs, provisioning their infrastructure and CI/CD through GitHub Actions.
- Designed a 3-stage release flow in GitHub Actions and Azure DevOps, with automatic deployment to development and approval gates before QA and production, and hardened its supply chain with GitHub OIDC instead of static keys, BuildKit secrets and SHA-pinned actions.
- Standardized builds and security checks for every application shipped so far, ciATHENA included: Docker multi-stage builds and Docker Compose, with Trivy, SonarQube, Gitleaks, Bandit, Flake8 and Safety in the pipelines.
- MLOps enablement: integrated the agent services with managed LLM APIs (Azure OpenAI, AWS Bedrock) and deployed them on Azure Container Apps and ECS Fargate with autoscaling rules and per-stage API credentials in Azure Key Vault.
- Monitored production and resolved incidents with Azure Managed Grafana, Azure Log Analytics, AWS CloudWatch and CloudTrail, backed by automatic revision-based rollback in Azure Container Apps that keeps the last healthy revision serving traffic when a release fails.
- Enabled Microsoft Entra ID SSO for both ciATHENA and GitHub Enterprise (SAML); compiled ISO 27001 evidence and contributed to SOC 2 preparation.

Pearl Thoughts

Jul 2024

DevOps Engineer Intern

Remote

- Engineered a multi-region Azure hub-and-spoke network: VNets, VNet peering, route tables with route propagation, network security groups, DNS zones and resource groups.
- Provisioned virtual machines, enabled Log Analytics workspaces and VNet flow logs, and applied consistent tags throughout the Azure estate.

SIYARAA EVOLUTIONS

Jun 2023

Java Programmer

Remote

- Packaged and shipped Java programs, maintaining dependencies and publishing artifacts to Nexus, with CI on 2 tools (GitHub Actions, CircleCI) and SonarQube code analysis.
- Released small apps to AWS Elastic Beanstalk and Azure, tracking logs in AWS CloudWatch and Azure Log Analytics.

ETL Developer

- Collaborated with the team on an event-driven AWS pipeline linking 5 components: S3 uploads triggered Lambda validation, EventBridge routed events, CloudWatch logged and alarmed, and SNS alerted the team.
- Activated Amazon Macie and configured IAM access roles for the workflow.

CERTIFICATIONS

- **AWS Certified CloudOps Engineer – Associate** · Amazon Web Services, Sep 2026
- **HashiCorp Certified: Terraform Associate (004)** · HashiCorp
- **AWS Certified Cloud Practitioner** · Amazon Web Services
- **Microsoft Certified: Azure Fundamentals (AZ-900)** · Microsoft
- **Oracle Cloud Infrastructure Foundations** · Oracle
- **Google Cloud Cybersecurity Professional** · Google
- **DevOps for Enterprise Agility** · IBM

PROJECTS

AWS ECS Platform Blueprint | [GitHub](#) Terraform · ECS Fargate · GitHub Actions · Prometheus

- Codified a three-tier AWS VPC across 2 Availability Zones with ECS Fargate and RDS PostgreSQL in Terraform, using 4 lifecycle-based modules (network, data, compute, observability) and isolated staging and prod stacks.
- Automated delivery with 3 GitHub Actions workflows (CI, Terraform, CD) that test, scan and deploy to staging, then gate production on human approval so no unreviewed change ships; Prometheus, Grafana and CloudWatch alarms to SNS.

Wisecow Kubernetes TLS | [GitHub](#) Docker · Kubernetes · cert-manager

- Containerized a Bash HTTP server and deployed it to Kubernetes with 5 manifests, fronted by NGINX Ingress with Let's Encrypt TLS issued and auto-renewed by cert-manager, removing manual certificate rotation.

Ansible Linux Lab | [GitHub](#) Ansible · Nginx · Linux

- Wrote an idempotent Ansible role for Nginx with validated handlers, 10-host batch rollouts and health checks.

TECHNICAL SKILLS

Cloud: Azure (Container Apps and jobs, App Service, Logic Apps, Front Door, API Management, Application Gateway, Key Vault, VNets and peering, Log Analytics); AWS (ECS Fargate, ECR, VPC, S3, Lambda, EventBridge, SNS, RDS, Elastic Beanstalk, Macie)

IaC & Containers: Terraform (modular, multi-environment), Docker (multi-stage builds, Compose), Kubernetes (NGINX Ingress, cert-manager), Ansible, Linux

CI/CD & Automation: GitHub Actions, Azure DevOps, Jenkins, CircleCI, Nexus

Security & Compliance: Azure WAF, Trivy, SonarQube, Gitleaks, Bandit, Flake8, Safety, GitHub OIDC, Entra ID SSO/SAML, Azure Key Vault, ISO 27001, SOC 2 preparation

Observability: Azure Managed Grafana, Azure Log Analytics, AWS CloudWatch, CloudTrail, Prometheus, Grafana

AI & LLM Hosting: Azure OpenAI, AWS Bedrock, managed LLM API integration, containerized agent services, API credential management

Languages: Python, Bash, SQL, Java, JavaScript

Databases: PostgreSQL, Azure SQL, Snowflake, Cosmos DB, Redis

EDUCATION

Manipal University Jaipur Jul 2024 – Jul 2026

Master of Computer Applications (part-time) · CGPA 9.01

Chandigarh University Jul 2021 – Jul 2024

Bachelor of Computer Applications · CGPA 8.53

AWARDS & LEADERSHIP

- Employee of the Quarter (Q1 2025) and Star Performer (Mar 2025), CustomerInsights.AI, for ciATHENA's launch.
- GDSC Cloud Lead: taught 500+ students cloud technologies through hands-on workshops.
